ПРЕДИСЛОВИЕ

Комбинационное зрение и способности к расчету вариантов являются одними из главных слагаемых успехов в шахматах. Все выдающиеся шахматисты были наделены этим даром в полной мере. Известны блестящие, далеко и точно рассчитанные комбинации в творчестве всех чемпионов мира, претендентов на мировое первенство, ведущих гроссмейстеров.

Эти способности, в большей степени, можно развить в себе систематическими занятиями и тренировками, чему и призвана служить данная работа.

Книга построена как сборник упражнений, дающий возможность каждому шахматисту самостоятельно тренироваться на постоянно усложняющемся материале, взятом в основном из практики. Представлены главным образом позиции, в которых назрел кризис, и решение — форсированный вариант или сеть вариантов.

Курс состоит из двух частей.

1. Основы тактики.

Позволяет овладеть основными приемами тактического мастерства; материал сгруппирован по 24 традиционным шахматным темам, которые иллюстрированы почти 900 классическими примерами.

Изучение этого базового курса закладывает основы для углубленного изучения шахматной тактики следующего раздела настоящей книги.

2. Углубленный курс шахматной тактики.

Содержит наиболее полную классификацию тактических приемов; примеры расположены по степени трудности, что позволяет использовать их как в самостоятельной работе, так и в условиях шахматных школ и кружков. Содержит около 3,5 тысяч тщательно отобранных примеров.

Благодаря многоуровневой системе подачи материала, он может быть использован как шахматистами-профессионалами, так и теми, кто делает первые шаги в изучении шахматной тактики.

PREFACE

Combinational vision and the abilities of calculating all the variations are the basic ways which lead to success in chess. All grandmasters of chess art wholly possessed a gift for that. Many outstanding chessplayers such as P. Morphy, M. Chigorin, A. Alekhin, M. Tal, B. Spassky, R. Fischer, A. Karpov, G. Kasparov, V. Kramnik, A. Shirov and others are well famous for their brilliant combinations, calculated accurately and for remote future.

It's quite possible to develop such abilities to a great degree by regular training. That's what this book is devoted to.

The book contains many exercises based on a practical experience. And they are gathered in such a way, that the following exercises are more complicated than the previous ones. These exercises can be used by all chessplayers for training on their own.

The book mainly shows the positions with crises and the decisions — forced variations or the series of variations.

The Course contains two parts.

1. Direct hit methods.

Give you possibility to grip the basic tactical methods; The material grouped by 24 traditional chess themes, which are illustrated by more than 900 classical examples.

Learning of this basic course — is the basis for the deep insight in chess tactics of the following part of this work.

2. Supported methods.

This part contains most full classification of tactical methods. Examples are placed by grade of difficulties for decision, that gives possibilities as for the works on its own, and in chess school and groups. There are 3500 hand-picked examples.

Thanks multilevel system material can be used as by professional chessplayers, so by those, who makes the first steps in learning chess tactics.
